

Your next smart move in data intelligence?

More and more companies are moving their business applications to the cloud. Usually, they start by migrating their operational and transactional platforms, such as their ERP and CRM systems.

But why stop there? Why not also move the core of your business insights – your data platform – to the cloud? This will give an extra performance and flexibility boost to your analytics teams.

Is data platform and analytics cloudification the right move for your company?
And what is the roadmap to move forward with your cloudification project?

Discover it here!

The concrete steps to take depend on the phase your organisation has currently reached.

These steps will help you:

- See if data platform & analytics cloudification is right for your company
- Progress from phase to next phase
- Get closer to a successful cloudification project

Step 0

Not yet started

- Discover the **opportunities** of cloudification
- **Rationalize** your cloudification **concerns** (including security, compliance, GDPR concerns)

Step 1

In evaluation phase

- Build your **business case** (including non-financial) & check **organizational readiness**
- Reflect on the right **use cases**
- Check the **feasibility box**

Step 2

In preparation phase

- Choose the right **cloud topology**
- Choose the right **cloudification approach**
- Confirm the **architectural components** for your first experimentations

Step 3

In experimentation phase

- Define and execute your **strategic Proof of Concepts**
- Finalize your **policies** and **operating processes**
- **Deliver first results** with your selected use cases

Step 4

In execution phase

- **Monitor** your **achievements**, make sure to optimize the benefits of the cloud way of working
- Actively **introduce** and **embrace** your **new way of working**, seed & expand successes of your first use cases
- **Accelerate trainings** throughout the whole organization

Ready to step up your cloudification game?
